C++

Date: 7th August 2021

Marks: 30

Create an Employee payroll system in C++.

The system should be helpful to organize the employee's details and their salary details. Along with being well-formatted, the system should be user-friendly.

Make use of classes and objects, one for each employee. Do this for 3 employees.

The system is supposed to be admin-centric i.e only the admin can access this system by the login credentials:

Username: admin_here

Password: 152209

If the entered username or password is incorrect, the user is to be notified.

The first screen is the login page:

```
-----Payroll System-----  
Enter username: admin_here  
Enter password: 152209  
  
Welcome back admin_here!
```

The next screen should provide the options to the user admin as follows:

```
Welcome back admin_here!  
  
Enter your choice:  
1. Add new Employee's data  
2. Display the data  
3. Search for an Employee  
4. Exit
```

1) Each employee should have the data of:

- | | | | |
|--------|--------------|---|-----------|
| (i) | id | - | integer |
| (ii) | name | - | String |
| (iii) | email | - | String |
| (iv) | Phone | - | 10 digits |
| (v) | basic_salary | - | float |
| (vi) | HRA | - | float |
| (vii) | DA | - | float |
| (viii) | gross_salary | - | float |

Methods to be created:

- | | | | |
|-------|------------------------|---|---|
| (i) | InputData() | - | this function should input all the data above |
| (ii) | DisplayData() | - | Should print in a format |
| (iii) | CalculateGrossSalary() | - | Should calculate gross_salary as
$\text{gross_salary} = \text{basic} + (\text{dap} * \text{da}) + (\text{hrap} * \text{hra})$ |

C++

Date: 7th August 2021

Marks: 30

The values for dap and hrap should be calculated as follows:

Basic	dap	Hrap
<=20000	0.6	0.8
>20000 and <50000	0.5	0.7
>50000	0.5	0.65

- 2) The program should prompt the admin to enter data for 3 new employees.
After adding the records, print all the three record in a format:

```
-----Display Data-----
```

```
Employee id: 1
```

```
Name:      Rahul
```

```
Email:      rahul@gmail.com
```

```
Phone:      9999999991
```

```
basic_salary: 25000
```

```
HRA:        10000
```

```
DA:         7000
```

```
gross_salary: 35500
```

- 3) The user is to be prompted to enter a new employee id. And the system should then search for the employee with the given id and then prints the details of that single employee.
